NOVAtime Technology, Inc. Announces Release of Innovative NT7000 Smart Time Clock

NOVAtime Technology, Inc. announces release of innovative NT7000 smart time clock.

Diamond Bar, CA (PRWEB) March 31, 2014 -- NOVAtime Technology, Inc. (http://www.novatime.com), a leading provider of enterprise Time and Attendance / Workforce Management solutions, has announced the launch date of their latest smart time clock – the NT7000.

NOVAtime's NT7000 time clock is scheduled for official release on April 7th, 2014. After extensive development and testing of both hardware and software elements, including a three-month beta period, the NT7000 has been met with enthusiasm and excitement by resellers and customers alike. In addition to its many enhancements, the device is sleek and professional, making it a great addition for any organizational setting.

The NT7000 provides many self-service features, such as the ability to punch in and out, perform job transfers, view schedules, view accrual balances, and submit leave requests. Additionally, the biometric fingerprint model can hold up to 5,000 finger enrollments, perfect for companies of all sizes. However, what truly sets the NT7000 apart are the enhancements and details that NOVAtime has developed specifically for this device.

One feature that companies can enjoy is the ability to load and play videos right on the device. This makes training employees convenient and easy. The NT7000 boasts a large 7" TFT LCD 1024 by 600 high-resolution display with capacitive touchscreen. And the vibrant colors and intuitive interface delivers a very user-friendly experience, no matter what functions need to be performed at the clock. Moreover, the display is crisp and sharp, making watching videos very pleasant. Another display enhancement includes options for different time clock wallpapers, making the device an even more aesthetically pleasing addition to work environments. Brian Harris, Vice President of Professional Services at NOVAtime, comments, "We have received great feedback about the NT7000. Customers love that it looks and feels like a tablet!"

For NT7000 fingerprint models, the device uses an advanced Lumidigm fingerprint reader for reliability and performance; the time clock delivers fast and accurate readings time after time compared to optical fingerprint readers. The reader uses the fastest commercial-based fingerprint matching algorithm, and combined with the NT7000's upgraded TI DM3730 1GHz CPU, results in unparalleled performance.

The NOVAtime NT7000 time clock also includes a wide-angle camera for optional photo capture when an employee performs a time punch. This provides employers with an additional method of identity verification, if desired. Additionally, NT7000 may be set to display customized list of questions at the clock, such as "did you take the required break and lunch" or "were you hurt on the job" to protect clients. Pending on the response, their supervisors may be notified by email.

Lastly, a great enhancement for the NT7000 is its multi-lingual support. All function prompts and messages displayed on the screen can be translated into Spanish, French or Chinese at the touch of a button.

NOVAtime's continual research and development utilizes the latest technology to create cutting-edge software and hardware for all of their customers. Gil Sidhom, Vice President of R&D of NOVAtime, states, "We develop our software and hardware devices with the user in mind, and we are happy that our customers appreciate all the extra details and features that make the NT7000 a truly great time clock." Frank Su, Founder

and CEO of NOVAtime, adds, "After extensive development, NOVAtime is proud to be releasing such an innovative and advanced product to the market, and we are excited that our customers are embracing this new technology."

About NOVAtime
With corporate offices located in Diamond Bar, California, NOVAtime Technology, Inc. is consistently recognized as a technological leader of the Workforce Management industry.
